

**What is the value of the 99 percentile?**

**2,2,3,4,5,5,5,6,7,8,8,8,8,8,9,9,10,11,11,12**

**n= 20**

**So by using formula :**

**Index = Given Percentile / 100 \* (n+1)**

**Index= 99/100\*21  
= 20.79**

**So we will consider the value of 20th index and after that (As the index in 20.79), But there are no values present after the 20th index so we will be consider that one only.**

**Ans: 12**
